Azure DevOps Service

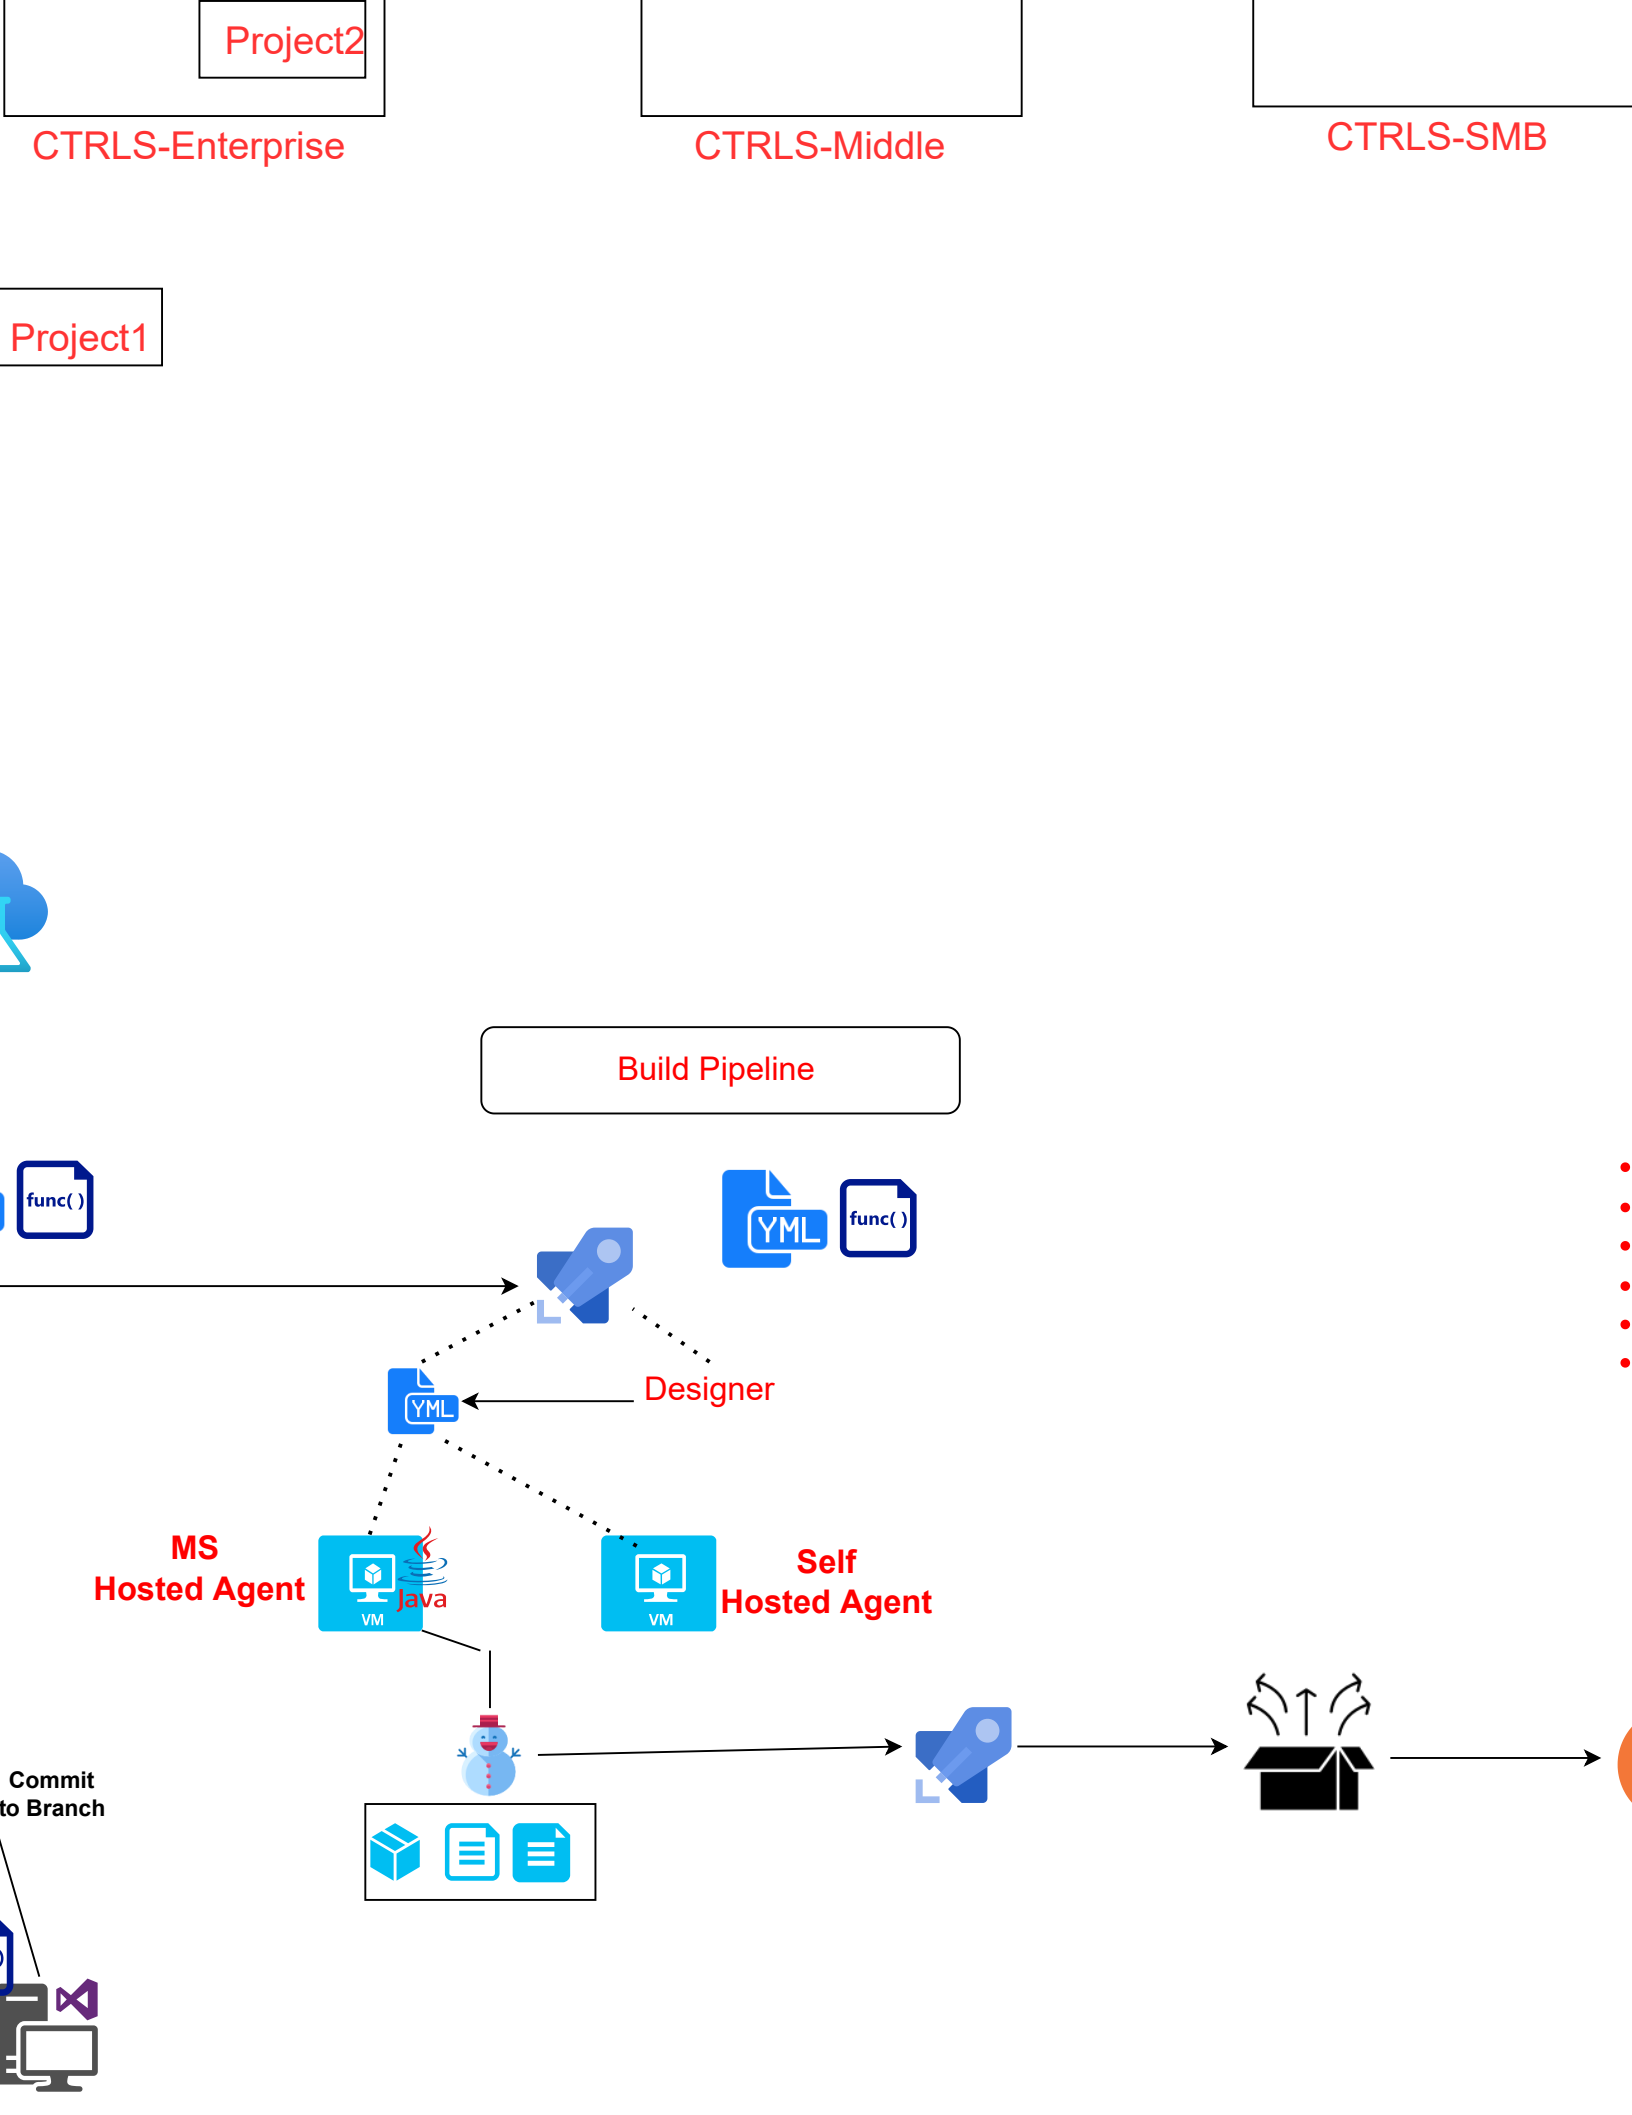

- **This is separate cloud service like Azure , o365,EMS,ERP**
- **This is separate licensed not by default part of Azure Licensed**
- **It has separate URL**
 - **office.microsoft.com**
 - **portal.azure.com**
 - **dev.azure.com**
- **Azure DevOps can also integrate with Azure AD for Auth and Auth**
- **To get the server we need azure for build and release**
- **It is cloud version of TFS**
- **Azure DevOps can manage any cloud platform**

Project1

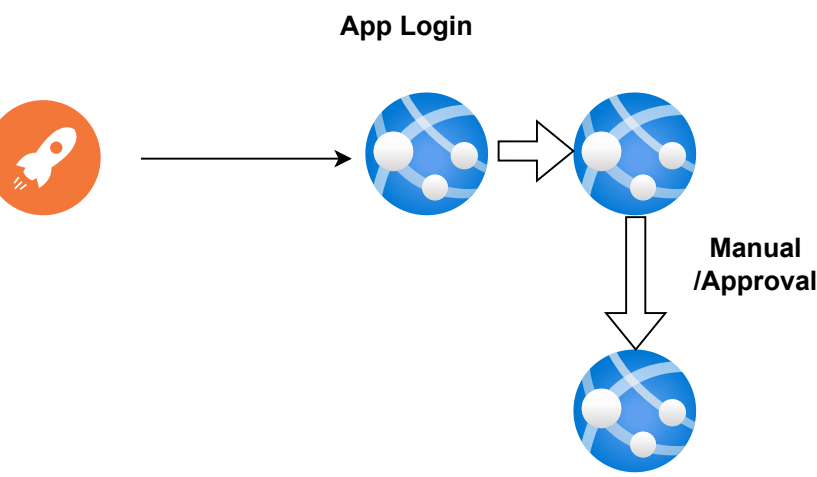

Commit Merge to
Main Branch

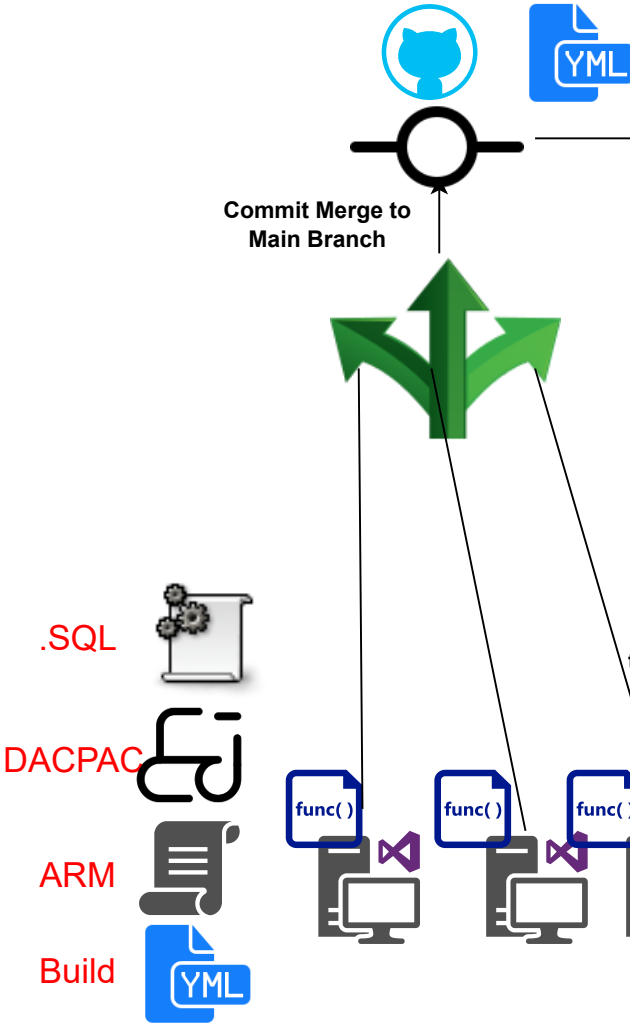

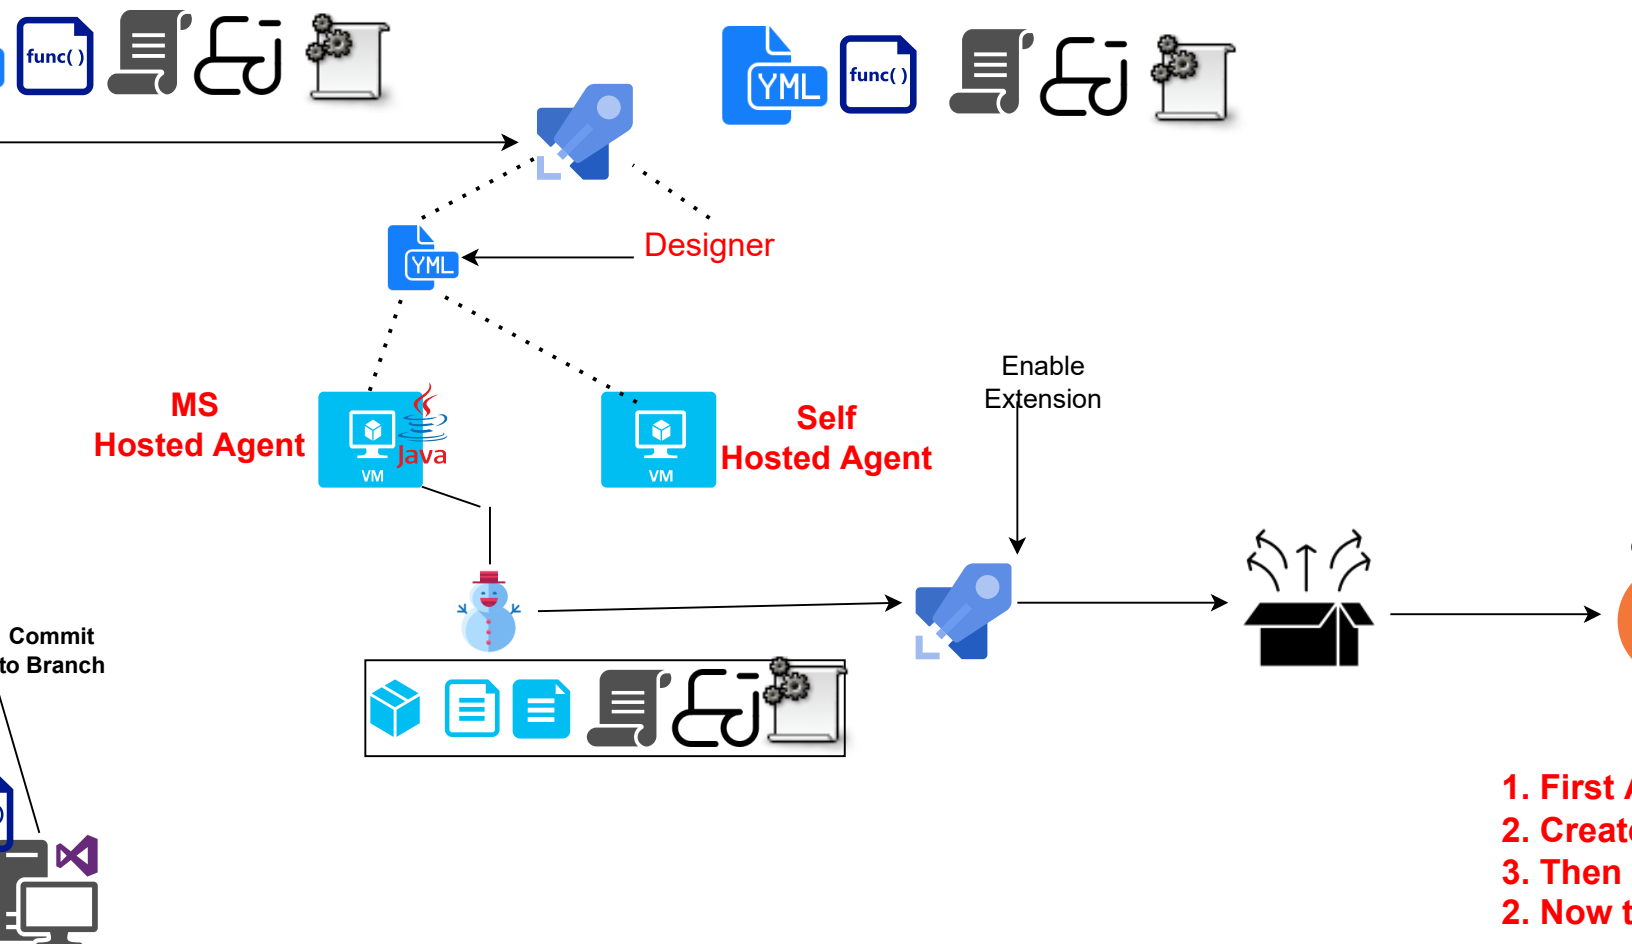

- Where is the Code?
- Which version (Dotnet 3/5)
- Sequence in which code need to compile
- Which OS this code can compile
- Which all packages we need to read(Nuget)
- Which package creation tool (msbuild /maven)

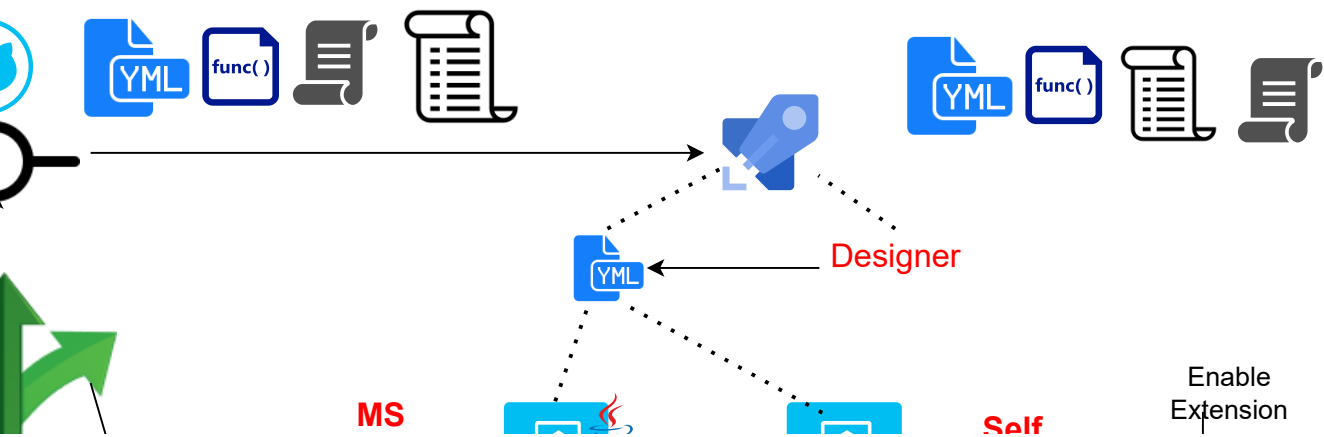

• Customer v

Customer want to deploy Dotnet Code to azure app with SQL as backend . They want all required infra to be created and managed

Customer want to deploy Java Code to Kubernetes . They want all required infra to be created and managed

and managed by dev team.

ARM Execute and Create infra
e SQL Database in SQL Server
Create SQL Table in SQL Database
they Copy the AppCode.

ged by dev team.

POM

ARM

Build

Azure DevOps Star

1. First ARM Execute and Create infra
2. Now they Copy the AppCode.
